SENTRY

Rugged, Dual-Sensor PTZ System

The Sentry is a modular multi-sensor PTZ that can be configured with our long range visible, ZLID™, and thermal camera options. These include our 4K/8 Megapixel 20–1225mm 61X zoom day/night camera, thermal imaging cameras up to 460mm, and up to 4km of ZLID™ illumination.

Combining these multiple sensors allows for accurate detection, recognition, and identification of potential threats. Active deterrence measures such as LRADs, spotlights, and laser dazzlers can also be integrated to ensure threats are not just detected, but mitigated.

The Sentry's strengthened aluminum construction and rugged IP66 housings use anti-corrosive coatings, allowing it to withstand the harshest climates for dependable perimeter security, mobile/marine vessels, homeland defense, and coastal protection.

Key Features:

- Multi-Sensor Visible and Thermal Integrated PTZ System
- HD or UHD Progressive Scan CMOS Day/Night IP Camera
- Long-Range Visible Zoom Options from 36X to 95X
- Visible/NIR Field of View Options from 75° to 0.36°
- 12µm 640×512 VOx Uncooled Thermal Imager or Optional SD or 1280×1024 HD Cooled Thermal Imager
- Uncooled VOx Thermal Imaging Options up to 310mm
- SD and HD Cooled Thermal Options up to 460mm
- Up to 21km Human Detection and 52km Vehicle Detection with Thermal (using Johnson Criteria DRI standards)*
- Endless 360° Pan and ±90° Tilt, with pan speeds up to 60°/s
- IP66 Military-Grade Design with Military Cable Connectors
- Designed for Fixed, Marine or Mobile Applications

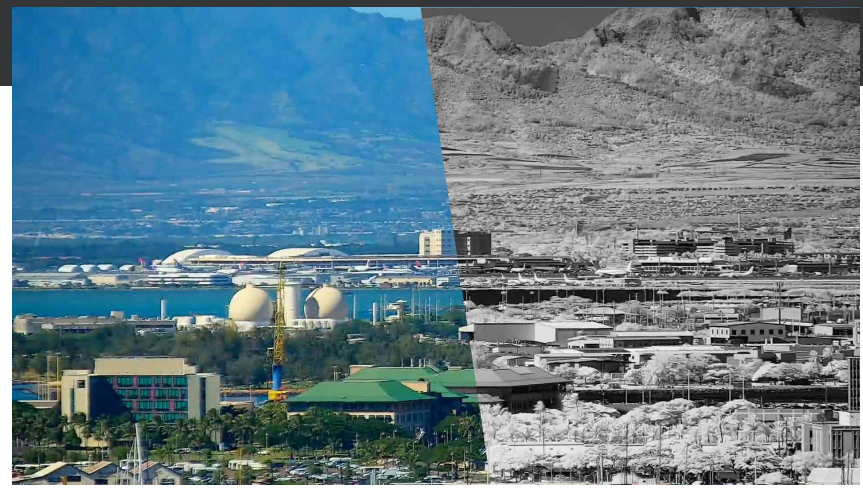
Visible/NIR HD Zoom Camera

INFINITI



Standard Color Visible Image
(Optical Fog Filter Disabled)

NIR Image
(Optical Fog Filter Enabled)

VIS/NIR Optical Camera

Infiniti's VIS/NIR zoom cameras utilize high-end CMOS sensors to offer excellent spectral sensitivity in the visible and near-infrared wavelengths of light to provide high-quality images optimized for long-range surveillance. They are designed to provide industry-leading performance and quality, with image resolutions ranging from 2MP (1080p HD) to 8MP (4K UHD). Precision engineered IR-corrected continuous zoom lens options offer a range of focal lengths with up to 95X optical zoom and integrated rapid autofocus to allow for long-range surveillance of targets without operator intervention.

Wide Angle Spotters

The Sentry PTZ can also support our optional wide angle spotter cameras for both visible and thermal. By integrating a second sensor with a wide angle lens, operators can maintain wide area situational awareness while simultaneously achieving detailed surveillance of targets at extreme long ranges.

Optical Fog Filter (NIR Only Mode)

While all of our sensors offer a nighttime NIR + visible mode for optimized sensitivity in low light, the cameras equipped with our NIR bandpass filter (also referred to as a "fog filter") allow users to isolate the NIR (near-infrared) wavelength of light during the day for clearer long-range daytime imaging.

Long-range imaging needs to see through large amounts of atmosphere which often contains particulates like smoke, haze/fog, and other atmospheric distortions. Cutting out the visible wavelength and isolating the NIR can mitigate the effects of smoke, haze and light fog, producing an image with better contrast and less distortion. Our optical fog filter lenses incorporate a motorized filter that is used with the camera's monochrome mode and de-haze image processing to see through smoke, smog and haze.

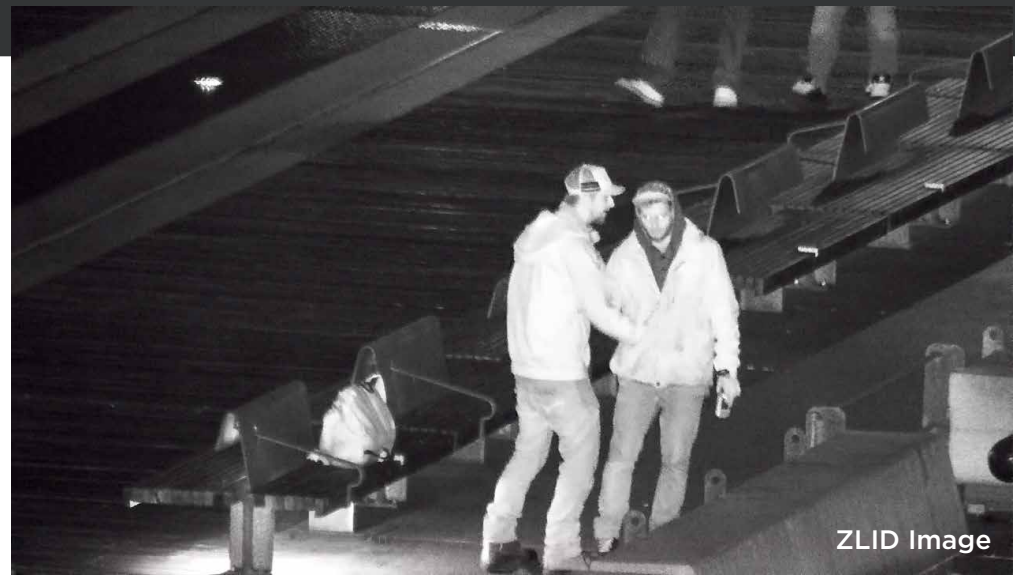
THE SENTRY'S

Night Vision Technologies

INFINITI

See in the Dark with ZLID™

IR (infrared) illumination allows for detailed video when there isn't enough natural light, however typical IR LED illuminators have very limited ranges. For longer-range illumination, a laser is needed. Many laser illuminators overexpose the center of the screen and leave the edges dark. Infiniti's ZLID™ (Zoom Laser IR Diode) technology synchronizes the IR intensity and area illumination with the zoom lens for outstanding active IR performance, eliminating over-exposure, washout, and hot-spots for clear images in complete darkness.



ZLID Image

See Further with Thermal

Thermal cameras use natually emitted heat to create their image. This means that no light source is needed, and thermal imaging performance works just as effectively in bright daylight as it does in complete darkness. Additionally, since humans, animals, and vehicles are usually warmer than their surroundings, thermal imaging renders these objects much brighter which makes them easy to spot, even when hiding in the shadows. Thermal images are also unaffected by headlights or spotlights and can see through atmospheric obstructions such as smoke, dust, and light fog. This makes thermal imaging an ideal technology for many applications including surveillance and security, search and rescue, fire fighting, marine and land navigation, wide area situational assessment, and much more.

The Sentry boasts industry-leading thermal cameras with uncooled LWIR and cooled MWIR resolution options of either 640×480 SD or 1280×1024 HD to ensure mission success.

THE SENTRY'S

Thermal Imaging Options: Cooled vs Uncooled

INFINITI

Uncooled Long Wave Infrared (LWIR)

Infiniti uses cutting-edge 12µm LWIR VOx uncooled thermal sensors with resolutions up to 1280×1024 HD. The 12µm pixel pitch provides a narrower field of view without changing the lens, allowing it to achieve 40% further range than 17µm sensors.

These sensors are paired with large aperture lenses of *f*/1.0–*f*/1.3, compared to the standard *f*/1.5–*f*/1.6, allowing up to 2.3 times more heat to reach the sensor. This results in higher sensitivity, sharper images, and longer ranges, making LWIR one of the most cost-effective long-range imaging solutions.

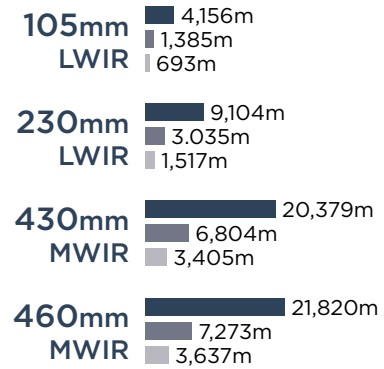
Cooled Mid-Wave Infrared (MWIR)

Infiniti offers cooled thermal in SD or HD options. Our 15µm 640×480 InSb or MCT sensors are comparable to the standard MWIR offerings in the industry. Our 10µm 1280×1024 HD X-Hot sensor provides 400% higher resolution and 50% longer range than traditional 15µm sensors. This means a 400mm lens on our X-Hot sensor is equivalent to a 600mm lens on a traditional 15µm sensor allowing it to provide a narrower angle (further zoom) for more detail at long distances.

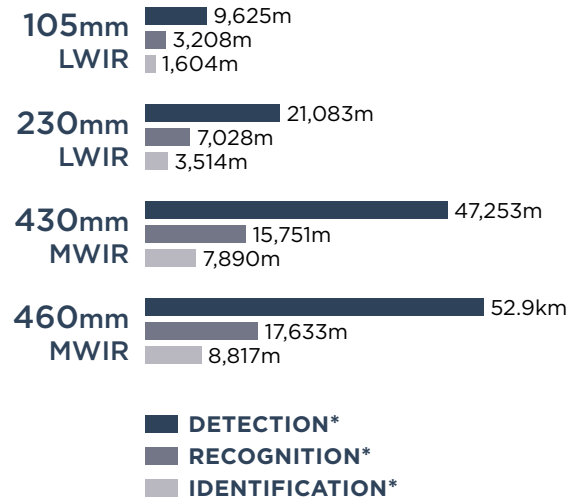
MWIR sensors use integrated cryo-coolers to cool the sensors down to -196°C (InSb) or -123°C (X-Hot). This exponentially increases the sensitivity of the thermal camera, allowing MWIR cameras to use smaller and more powerful lenses than uncooled LWIR cameras, however the cryo-coolers do require maintenance at intervals that vary depending on sensor type and environment.

Our new **Thermally Compensated Optics (TCO)** technology maintains MTF, back focal distance, and effective focal length across a wide range of operating temperatures. This TCO technology effectively mitigates challenges posed by thermal expansion. Paired with our HD InSb or X-HOT MWIR thermal cores, Infiniti's systems provide high contrast and ultra long distance infrared imaging for mission critical applications such as threat detection, surveillance, auto-tracking and targeting. With lens options capable of detection ratings* over 55km (based on DRI ratings in ideal conditions), the Arc is the ultimate thermal surveillance platform.

Human DRI:



Vehicle DRI:



*DRI detection ratings are based on industry-wide standards (Johnson's Criteria) that can be misleading if not properly understood. For more information, please see our whitepaper about understanding DRI measurements at: www.infinitioptics.com/dri

* D R I While DRI ratings are based on the industry-standard Johnson's Criteria, they represent theoretical maximums under ideal conditions that typically exceed real-world performance. Additionally, a "Detection" rating means that a target will appear only as a tiny speck of pixels, rather than as a clearly defined or recognizable object. For more info, please see our whitepaper about understanding DRI at: www.infinitioptics.com/dri

Focal lengths and FOVs are within ±5%.
